

Web Application Development Practical - jQuery Mobile Website

Aim: To create a simple mobile website using jQuery Mobile framework.

Theory:

jQuery Mobile is a touch-optimized web framework used to create responsive mobile-friendly websites and applications. It is built on top of jQuery and provides mobile UI components such as buttons, pages, headers, footers and navigation menus. jQuery Mobile automatically adjusts the website layout according to mobile screen sizes.

Requirements:

1. Text Editor or VS Code
2. Internet Connection
3. Web Browser

Detailed Procedure

Step 1: Open VS Code or any text editor.

Step 2: Create a new folder for project.

Step 3: Create index.html file.

Step 4: Add jQuery and jQuery Mobile CDN links.

Step 5: Create mobile page structure using data-role attributes.

Step 6: Add header, content section and footer.

Step 7: Add buttons and navigation menu.

Step 8: Save the file.

Step 9: Open index.html in browser.

Step 10: Resize browser or open in mobile device to test responsiveness.

Project Structure

```
jquery-mobile-project/  
├──  
└── index.html
```

Complete index.html Code

```
<!DOCTYPE html>  
<html>  
  
<head>  
  
    <title>jQuery Mobile Website</title>  
  
    <meta name="viewport" content="width=device-width, initial-scale=1">  
  
    <link rel="stylesheet"  
    href="https://code.jquery.com/mobile/1.4.5/jquery.mobile-1.4.5.min.css">  
    <script src="https://code.jquery.com/jquery-1.11.1.min.js"></script>
```

```
<script src="https://code.jquery.com/mobile/1.4.5/jquery.mobile-1.4.5.min.js"></script>
</head>
<body>
<div data-role="page" id="home">
  <div data-role="header" data-theme="b">
    <h1>My Mobile Website</h1>
  </div>
  <div role="main" class="ui-content">
    <h2>Welcome to jQuery Mobile</h2>
    <p>
      This is a simple responsive mobile website created using jQuery Mobile.
    </p>
    <a href="#about"
      class="ui-btn ui-btn-b ui-corner-all">
      About Page
    </a>
    <a href="#contact"
      class="ui-btn ui-btn-inline ui-btn-a">
      Contact
    </a>
  </div>
  <div data-role="footer" data-theme="b">
    <h4>Mobile Website Footer</h4>
  </div>
</div>
<div data-role="page" id="about">
  <div data-role="header" data-theme="b">
    <a href="#home"
      data-icon="back">
      Back
    </a>
    <h1>About</h1>
  </div>
  <div role="main" class="ui-content">
    <p>
      jQuery Mobile helps developers build responsive websites easily.
    </p>
  </div>
</div>
<div data-role="page" id="contact">
  <div data-role="header" data-theme="b">
    <a href="#home"
      data-icon="back">
      Back
    </a>
    <h1>Contact</h1>
  </div>
  <div role="main" class="ui-content">
    <form>
```

```
<label>Name:</label>
<input type="text" placeholder="Enter Name">
<label>Email:</label>
<input type="email" placeholder="Enter Email">
<label>Message:</label>
<textarea></textarea>
<button class="ui-btn ui-btn-b">
    Submit
</button>
</form>
</div>
</div>
</body>
</html>
```

Features of jQuery Mobile

1. Responsive Design
2. Mobile-Friendly UI Components
3. Easy Navigation
4. Touch Optimization
5. Cross Platform Support

Advantages of jQuery Mobile

1. Easy to Learn
2. Fast Development
3. Lightweight Framework
4. Responsive Layout
5. Supports Multiple Devices

Explanation:

The website uses jQuery Mobile framework for creating responsive pages. The data-role attribute defines mobile UI components such as pages, headers and footers. Navigation between pages is performed without loading separate HTML files. The website adjusts automatically according to screen size and works properly on mobile devices.

Result: A responsive mobile website was created successfully using jQuery Mobile framework.
